Objective

Dedicated Computer Science engineer specializing in Artificial Intelligence, Machine Learning, and scalable software development. Eager to apply a strong foundation in algorithmic optimization, predictive modeling, and automation to build robust financial technology solutions. Proven ability to collaborate on prototyping scalable AI systems and building high-performance solutions for complex, real-world problems using Python and Java.

Education

Lovely Professional University, *CGPA: 8.21* **Jalandhar, Punjab**
Bachelor of Technology in Computer Science and Engineering *2027*
Relevant Coursework: Data Structures and Algorithms, Operating Systems, MachineLearning, Artificial Intelligence, Computer Networks, Software Engineering
Advanced Learning: Advanced Data Structures (Completed by July)

Race Junior College **Kurnool, Andhra Pradesh**
Senior Secondary School Certificate (12th Grade), Percentage: 96.6% *2023*
Key Subjects: Physics, Chemistry, Mathematics, Computer Science

De Paul High School **Kurnool, Andhra Pradesh**
Secondary School Certificate (10th Grade), Percentage: 99.8% *2021*
Achievements: School Topper

Technical Skills

Programming Languages: Python, Java, C, C++
AI/ML Technologies: Pytorch, TensorFlow, Scikit-Learn, Generative AI(LLMs)
Domains: Natural Language Understanding, Computer Vision, Machine Learning, Data Mining
Frameworks & Tools: React.js, FastAPI, Git, OpenCV, MediaPipe, Streamlit
Databases: MySQL, MongoDB

Research & Innovation

Patent Pending: Filed a patent for the "Automated Digitization and Semantic Classification of Handwritten Student Grievance Forms" (Dec 2025).
Developed an AI-based system for document digitization and semantic classification using machine learning and NLP techniques.
Academic Research: Authored a research paper detailing the architecture and performance of an OCR and NLP grievance classification pipeline.

Projects

Project Title: *AI Credit Scoring Engine*
Description: Synthesized complex data sets to generate insights into financial risk, directly applying machine learning to a core banking challenge.
Technologies Used: XGBoost, SHAP, FastAPI.
Impact/Achievements: Developed an end-to-end engine using XGBoost to predict loan default risk, improving classification accuracy over baseline statistical methods.
Demo/Code Link: GITHUB

Project Title: *Seed Quality Analysis*
Description: An automated computer vision system to classify corn seed quality into categories such as High, Medium, or Low, helping in agricultural quality assurance.
Technologies Used: TensorFlow, MobileNetV2, Streamlit (for UI/deployment).
Impact/Achievements: Speeds up seed quality inspection. Helps reduce manual errors in agricultural evaluation.
Demo/Code Link: GITHUB

Project Title: *Health Care Agent*
Description: An AI-powered medical claims integrity agent that automates the verification process and detects anomalies in healthcare claims.
Technologies Used: Python, Generative AI (LLM Agents).
Impact/Achievements: Enhances accuracy in medical claim verification. Reduces manual workload and false claims.
Demo/Code Link: GITHUB

Certifications

Computer Vision Specialization: Certification by Colorado Boulder (Completed in Feb 2026).
Machine Learning for All: Certification by University of London (Completed in Nov 2025).
GenAI-Powered Data Analytics: Certification by Udemy (Completed in Oct 2025).
Master Generative AI & Tools: Certification by Infosys Springboard (Completed in Oct 2025).

Achievements

Hackathon Winner: Secured 2nd place in the University Machine Learning Hackathon (Jan 2026).

Patent Filed: AI-based Document Digitization System (Dec 2025)
